BUSINESS INTELLIGENCE AND REPORTING

Intelligent steering and planning for your business

The Proginov business management ERP system incorporates Proginov Analytics, a new-generation business intelligence tool that gives everyone access to information within the company. Business users can quickly create customised analysis dashboards.

Using "in-memory" technology, find the answers to questions in just a few clicks.

// Access to all data

Tune into your business data with unlimited access. "In-memory" technology lets you manage and analyse large volumes of stored data. With the associative vector database, you can take advantage of existing links between your data to refine analyses in just a few clicks.

Proginov provides standard applications covering different businesses that form a solid foundation to begin using the tool.

A library of business metrics (revenue, margin, etc.) is available. It can then be expanded as needed. You can create an unlimited number of documents. Cross-data can come from different environments (commercial management, accounting, payroll, etc.).

// User-driven approach

Once defined, the data model enables users to build pick lists, two-way tables or graphs without worrying about technical constraints, cardinality or joins between tables.

You can develop dashboards independently at every stage of the chain, from data modelling to building and customising the dashboard.

Proginov gives you your source data in the form of a file library that's an exact copy of your data stored in the ERP databases. Once the files have been retrieved, you can feed them into your documents and build them according to your needs. This method is 10 to 100 times faster than conventional data reading.

Powerful business intelligence

Shorter development time

Mobility

Security and availability

Extremely detailed analysis

PROGINOV
business management software

// Data security and availability

The intuitive interface and operating logic make it quicker to implement than conventional business intelligence solutions. Moreover, the business intelligence documents are published on Proginov's servers, which means that your strategic data benefit from the power, security and confidentiality afforded by Proginov's hosting service.

Data can be accessed via the ERP menu, in an application window, in the same way as statistics. The access rights to the data are the same as for the ERP system. The applications can also be accessed via a web portal, PDA, smartphone, tablet, etc.

PROGINOV
// ANALYTICS

TOP FEATURES

- Analysis criteria and filters can be selected in just a few clicks, with real-time recalculation of the entire dashboard

- Criteria and filters selected can be saved as favourites

- Collaborative mode lets you share documents online with other users, annotate them and add personal items

- Google®-type searching (full text, partial, fuzzy)

- Manage images and colour indicators

- Option of browsing through data hierarchies (drill-down, tree structures, etc.)

- Comparative analysis of two data sets

- Export data to Excel®

- View data on Google Maps®

- Create PDF reports on the fly and email the file with data specific to the recipient.
